Date :2008-11-1. This book follows the content utility. ease of fit. design-oriented. focusing on capacity-building requirements. describes the exhaustive. back. sub- rule. recursion. recursive. greedy algorithm and dynamic programming and other commonly used computer algorithms. and briefly describes the simulation. intelligent optimization and parallel processing. Book focus on the design and application of commonly used algorithms. algorithm design and implementation of integration programs. as well as the improvement and process optimization algorithm. and strive to combine theory and practice. algorithms and procedures for unity. General. the algorithm described in the book gives a complete C program. and TC (VC) environment through the compiler. used for the learning algorithms and computer programs designed to provide an example. In order to facilitate exercise for the reader. each chapter comes with exercises. and exercises given in the Appendix the algorithm solving tips. This book can be used as computer and related professional institutions of higher learning algorithm design and analysis. common computer algorithm and program design course materials are also available for software designers and computer enthusiasts to learn information. Contents: Chapter 1.
